# Medtech in Ireland

Irish MedTech Association

Strategy 2022 – 2025

## Ireland continues to be a leading global hub for medtech

1st

Ireland is the no. 1 exporter of contact lenses from the EU and globally.

1st

Ireland is the no. 1 exporter of stents in the EU and globally.

2nd

Ireland is the 2nd largest exporter of medtech in Europe.

4th

Ireland is the 4th largest exporter of artificial joints in the EU.

4th

Ireland is the 4th largest exporter of diagnostic reagents from the EU.

14th

14 of the world's global 15 medtech companies are in Ireland.

450

42,000 directly employed in medtech across 450 companies making it the largest employer of medtech professionals in Europe, per capita.

12BN

Annual exports of c.€12.6 billion.

75%

75% of global medtech companies with operations in Ireland are carrying out R&D.

# Medtech in Ireland

Irish Medtech Association

Strategy 2022 – 2025

## Defining Ireland's medical technology sector

Medical technology companies are defined as companies that:

- Design and/or manufacture medtech products and/or solutions, including software and hardware for healthtech.
- Manage significant international shared services from Ireland.
- Directly service the medtech sector.

The sector is diverse, and the following seven broad categories have been established to describe and the sector in Ireland:

### 1. Diagnostic

Devices or software used to identify a disease, condition, or injury.

### 2. Ophthalmic

Diagnosis and treatment of conditions relating to the eye.

### 3. Vascular/ Endovascular

Relating to the treatment of vascular disease.

### 4. Orthopaedic

Relating to the treatment of musculoskeletal system including muscles, bones, joints, ligaments, and tendons.

### 5. Hospital/ Homecare

Other segments of the market not captured here such as respiratory, surgical devices, minimally invasive devices and so forth.

### 6. Neurology

Concerning disorders and diseases of the nervous system including the brain and spinal cord, peripheral nerves and muscles.

### 7. Service

Outsourced function to a third party such as product development, design, manufacturer and generation of intellectual property.

# Medtech in Ireland

Irish Medtech Association

Strategy 2022 – 2025

## Defining Ireland's digital healthtech sector

The digital healthtech sector in Ireland is diverse and the following nine broad headings have been established to describe and categorise the sector in Ireland. These categories broadly reflect solution types to offer a consistent view of digital health activity in Ireland.

### 1. Connected medical devices

Wearable and wireless medical devices; software driven diagnostic products; therapy delivery devices; biometric sensors.

### 2. Digital therapeutics

Software driven therapeutics.

### 3. Mobile health (mHealth) and wellness

Wellness, fitness trackers, nutrition and lifestyle apps; virtual health assistants; healthcare coaching.

### 4. Personalised healthcare

Precision medicine; personalised support, symptom management and interventions; Clinical decision support solutions.

### 5. Remote patient monitoring & telehealth

Remote patient monitoring solutions; medication adherence tools; telemedicine virtual visits and remote care programmes.

### 6. Health Information Technology (HIT)

Electronic medical record systems; electronic prescribing and order entry systems; consumer health IT applications

### 7. Connected care management

Care management platforms, staffing, and financial management solutions.

### 8. Data, analytics and cyber security

Patient data hosting; encryption and cyber security; AI and predictive analytics; digital biomarkers.

### 9. Technology solutions and infrastructure

ICT services and infrastructure; IoT solutions.

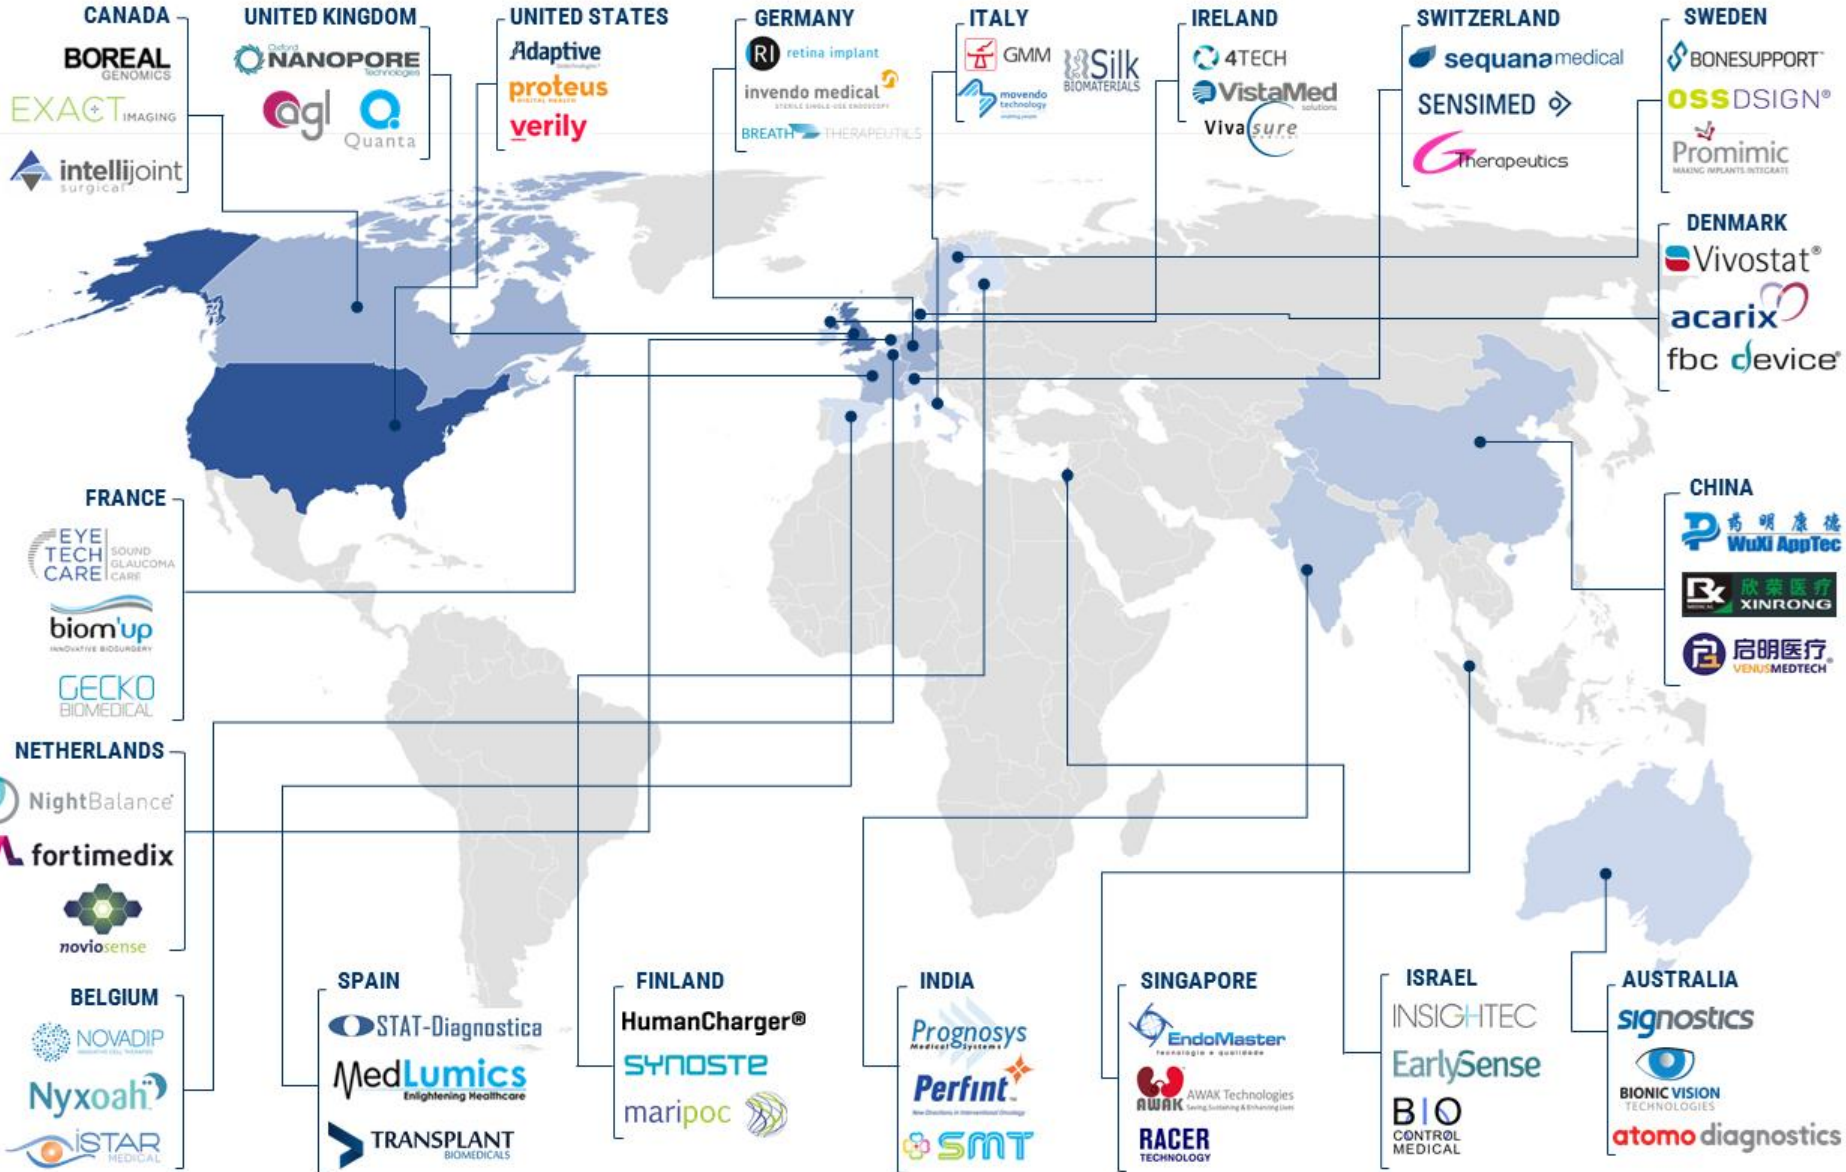

# Medtech in Ireland

*“450 companies  
employing 42,000 people  
to deliver €12.6 billion in medtech exports”*

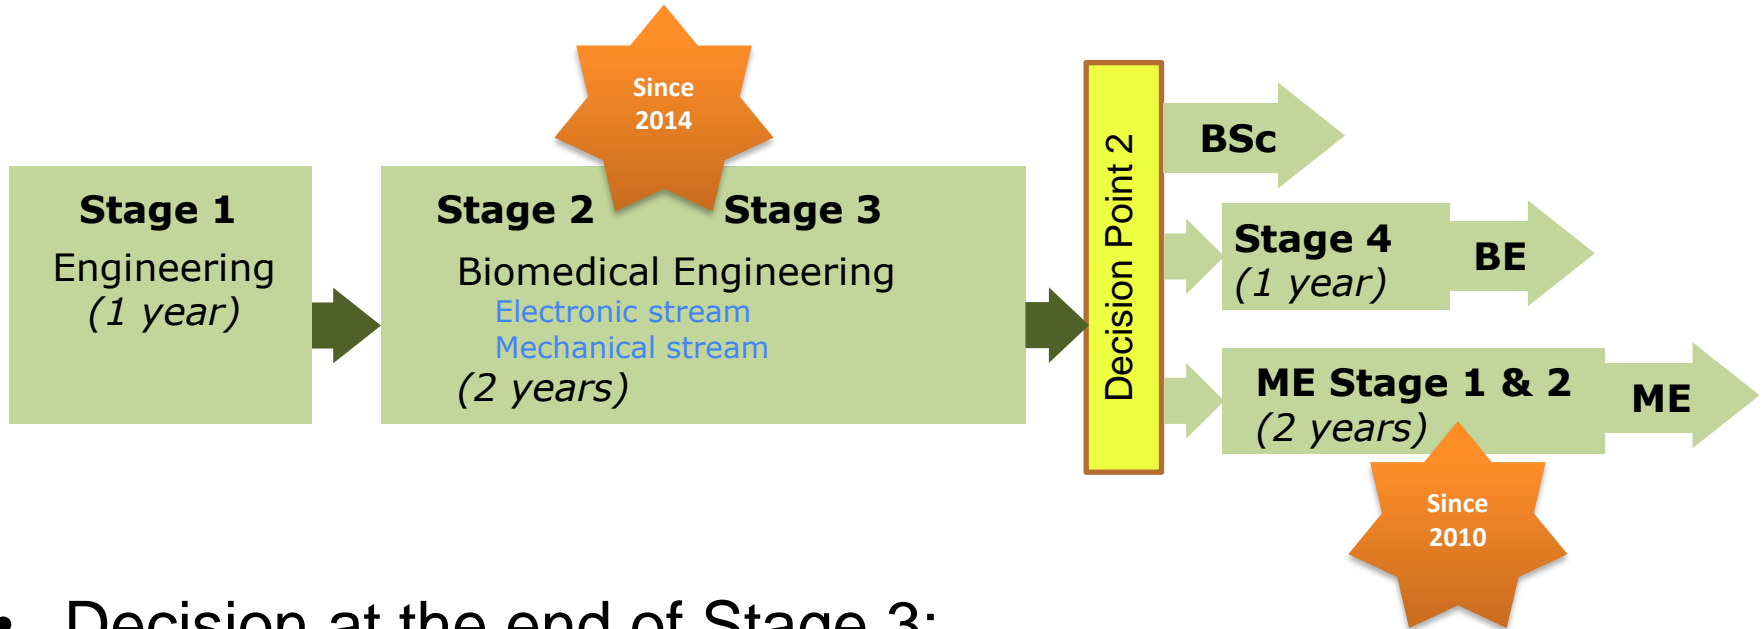

# MOST WELL-FUNDED MEDICAL DEVICE COMPANIES ACROSS THE GLOBE

As of 5/4/17

# Biomedical Engineering pathways at UCD

- Decision at the end of Stage 3:
  1. Graduate with **BSc** (Engineering Science)
  2. Progress to Stage 4 of **BE in Biomedical Engineering**
    - Or, if eligible (weighted GPA  $\geq 2.8$ ):
  3. Progress to Stage 1 of **ME Biomedical Engineering** programme

*BSc: Bachelor of Science  
BE: Bachelor of Engineering  
ME: Master of Engineering*

# UCD Biomedical Engineering programmes

# Stage 2 Biomedical Engineering modules

Trimester	Module Code	Module Title	Credits	Level
Autumn	MATH 20290	Multivariable Calculus for Engineers	5 Credits	level: 2
Autumn	EEEN 20020	Electrical & Electronic Circuits	5 Credits	level: 2
Autumn	MEEN 20010	Mechanics of Fluids I	5 Credits	level: 2
Autumn	PHYS 20040	An Introduction to Physiology	5 Credits	level: 2
Autumn	EEEN 20010	Computer Engineering I	5 Credits	level: 2
Autumn		<b>Elective</b>	<b>5 Credits</b>	
Trimester	Module Code	Module Title	Credits	Level
Spring	EEEN 20030	Engineering Electromagnetics	5 Credits	level: 2
Spring	STAT 20060	Statistics and Probability for Engineers	5 Credits	level: 2
Spring	MEEN 20040	Mechanics of Solids I	5 Credits	level: 2
Spring	MEEN 20030	Applied Dynamics I	5 Credits	level: 2
Spring	MEEN 20070	Materials Sci & Eng I	5 Credits	level: 2
Spring		<b>Option</b>	<b>5 Credits</b>	

## Options

Trimester	Module Code	Module Title	Credits	Level
<b>Option Modules*</b>				
Spring	EEEN 20040	Electronic Circuits	5 Credits	level: 2
Spring	MEEN 20060	Mechanical Engineering Design I	5 Credits	level: 2
<b>In-Programme Electives</b>				
Autumn	MEEN 20020	Manufacturing Engineering I	5 Credits	level: 2
Autumn	MEEN 20050	Heat Transfer	5 Credits	level: 2
Spring	BSEN20190	Intro to Carbon and Energy Footprinting	5 Credits	level: 2

\* Rule for Options: Select 1 of 2 in Trimester 2 (Spring)

Students intending to pursue the Mechanical Engineering stream of Biomedical Engineering MUST select "MEEN20060 Mechanical Engineering Design I" as their Stage 2 Option.

Students intending to pursue the Electronic Engineering stream of Biomedical Engineering MUST select "EEEN20040 Electronic Circuits" as their Stage 2 Option.

# Stage 3 Biomedical Engineering modules

Trimester 1	Module Code	Module Title	Credits	Level
Autumn	ACM30030	Multivariable Calculus for Engineers II	5 Credits	level: 3

# Employer testimonials (work placements)

*'Also, just a note that we were blown away by the quality of the applications from UCD this year - it was very tough choosing between them at both interview and offer stages. The UCD students really stand out from the other candidates (and we had applicants from all over Ireland and around Europe).'*

Shimmer Technologies

*'It's rarely I feel the need to go into writing on feedback directly to Universities in relation to student placements we receive here in Boston Scientific, in fact this will be the first time. However, in the case of your Masters students who have just finished placements with us here in the past few weeks..., I feel the need to specifically highlight that these students were of a stand-out nature and not only developed considerably themselves during their placements, but contributed very well to our business – in fact to the extent that they will leave a vacuum behind them now that they have returned to college...As is the case with students of the standard, they are fast learners, very intelligent, constantly ask the right questions and always bring new perspectives. In addition to this, however, what really made these students stand-out for me was their level of enthusiasm, engagement, perseverance, thoroughness, ability to integrate within the team and their strong work ethic.'*

Boston Scientific

# Sample ME Projects (2024/2025)

- Development and characterisation of biopolymer-doped electro-spun scaffolds.
- EEG signatures of perceptual decision making—moving from two to multiple alternatives.
- Experimental Analysis and Design of Aortic Valve Systems.
- Design of an apparatus and testing protocol for evaluating the device body interface of prostheses and orthoses.
- Design of a bespoke diffusion assay for microneedles.
- Estimating energy expenditure in elite athletes to monitor relative energy deficiency in sport (REDS).
- A computational design tool for soft orthoses and harnesses.
- Accuracy of Thin-Walled Parts Relative to Build Plate Recoater.
- Microstructure-informed mechanical behaviour of pancreatic tumours.
- Sense of agency for myoelectric control.
- Optimizing Lipid Nanoparticle Formulations for RNA Therapeutics A High-Throughput Approach.
- Development and Validation of a Perfusable Organ-on-Chip Device for Drug Testing.
- Longitudinal analysis of acoustic speech biomarkers in Huntington’s disease.
- Testing of a novel robot for gait rehabilitation based on a recumbent bike design.
- Effect of fatigue on lower limb biomechanics of repeated jumping in male soccer players.
- Using Machine Learning Tools to Automate Signal Quality Control for Large Dataset Study.
- Design of a novel growth modulation device for treating knee deformities in children.
- Investigating oropharyngeal muscle activity in obstructive sleep apnea.
- Examining EEG signals of sensorimotor decision formation during learning of myoelectric control.
- Applying machine learning to automate segmentation of different tissue types.
- Optimize the development of a microfluidic device using different 3D bioprinting techniques.
- Investigating the effect of tongue position on maximum tongue force using different tongue training devices.
- The biaxial material properties of skin.
- Unravelling Meniscal Development: A MultiModal Analysis of Structural and Biomechanical Changes from Birth to Adulthood.
- Deriving individually-specific EEG indices of motor preparation for assessment of decision making.
- Estimating brain strain in extreme sports related traumatic brain injuries.
- Design of adaptive controllers for deep brain stimulation.
- Achilles tendon – its age-related changes and potential clinical utility in men.
- Evaluation of STING expression in Osteosarcoma tumours.
- Predictive simulations of lower-limb cycling rehabilitation.
- A Platform for Assessing the Brain Processes behind Driver Decisions in Urban Mixed-mode Traffic.
