

Introduction

Details of the Children's Sport Participation and Physical Activity (CSPPA) study 2022 can be found from study website, <u>https://csppa.ie</u>. Published reports can be found on the website. In the reports are details of the methodology. The website has addendum to the first published version of the report. There are three types of missing values in this data dictionary. This is because some items where checkboxes, and these should be treated differently from values that are true missing values (i.e. the student did not answer). In Table 1 is an explanation for the missing values in the data file.

Missing Value	Interpretation	Example
-99	Missing	A participant did not respond to the item, and moved on to the next
		item. Therefore, for this item, the participant's response is -99 or
		'missing'.
-88	Irrelevant	A participant selected 'no' to the question about being a sport club member. Since they responded 'no', they did not have to answer questions about what sports they do in their sport clubs. As such, the participant was not given the option to respond to the question and is coded as -88 or 'irrelevant'.
-999	Not selected	In questions of checklists, (i.e., select which sports they participated in the past year), when a participant does not select it, there is no data on the file. These have been recoded as -999 or 'not selected' to distinguish between responses deemed as 'missing'.

There are a total of 452 variables in this data dictionary. All the variables are visible on the variable information section. Variables with nominal values can be found in the Value Labels section of this document. For this data set, there is no data from CSPPA 2010 or 2018.

To ensure the data is anonymised, yet preserving some personal data to be treated as background variables, the values for primary school grade were combined for the $5^{th}/6^{th}$ Class (ROI) or $6^{th}/7^{th}$ years (NI). Also, age of the student was combined into grouped variables, as shown in the CSPPA report.
