## Stage 1: Stratified Random Selection of Sampling Points

The selection of the sample required a stratified random selection of addresses, or sampling points, to distribute the sample geographically throughout the Republic of Ireland, proportional to population. The universe for this study was identified as all adults aged 16+.

The Republic of Ireland is divided geographically into 3,440 Electoral Divisions (EDs) ranged across Urban and Rural districts throughout the country. These EDs provided the basis of the sampling frame from which individual EDs were identified as the primary sampling units for this study.

In order to ensure that the EDs selected were representative of the required population in terms of their distribution around Ireland, variables from the 2016 Census were used to stratify the population of EDs prior to the selection process, namely region and degree of urbanisation.

The first stage in the selection of these sampling points involved the analysis and stratification of the population 16+ by broad region:

- Dublin,
- Rest of Leinster,
- Munster and
- Connaught/Ulster.

Within each region, further stratification by community size (urbanisation) was applied:

- County Borough,
- Towns population 10000+;
- Towns population 5000-10000;
- Towns population 1500-5000 and
- Rural areas population < 1500.

Within each of these cells, all wards, towns and EDs were listed with their populations and the required sampling points were selected proportional to their population, utilising a random, systematic selection process. In this manner 100 EDs

were selected by identifying every  $n$ th ED. This framework ensured a spread of interviewing across all urban and rural dimensions, and further ensured that all households had an equal opportunity for selection regardless of the size of the ED in which a household was situated.

In this manner the sample was spread geographically across the entire country.

## **Stage 2: Setting Quotas**

At each sampling point quota controls were applied to ensure that the sample was representative of the universe in terms of required demographic criteria.

The population distribution by age and gender was calculated for each major region of the country based on the known population estimates derived from the Census of Population 2016 or, where appropriate, updates provided by the Quarterly National Household Survey. Quota controls were then set for key attributes within each region. Quota controls were based on:

- Age within gender
- Socio-economic status

Interviewers were provided with specific interviewing quotas detailing the exact number of interviews to be conducted with each demographic group. Respondent selection in terms of socio-economic status was based on the occupation of the head of household.

## **Stage 3: Selection of Household**

Once the selected wards / EDs were identified, a unique household address was selected at random from the full list of addresses within that ED. The list of addresses used for this purpose is provided by Geo Directory, a complete Irish address database, listing all households in Ireland. This list is maintained by An Post. This address was issued to the interviewer as a *starting address*, and forms the nucleus of a cluster of 15 interviews.

From this identified starting address, interviewers followed a random route procedure to fulfil their full quota of interviews. The interviewer made contact at the starting

address and attempted to achieve an interview in that household. From that house, the interviewer called to every 5<sup>th</sup> house in urban areas (following a zig-zag route) and every ¼ mile in rural areas. At each house on this route an interview was conducted if a person in that household matched the demographic quota controls set for that sampling point. In this manner, the required quota of interviews was filled at each sampling point.

	3	Other
	4	Prefer not to say

## Employment

		Value
Standard Attributes	Position	6
	Label	C. Which of these best describes your current employment situation?
	Type	Numeric
	Measurement	Nominal
Valid Values	1	Working as an employee
	2	Self-employed
	3	Retired
	4	Other

## vote

		Value
Standard Attributes	Position	7
	Label	Q.1 Which of these statements apply to you? I voted in the last general election
	Type	Numeric
	Measurement	Nominal
Valid Values	1	Yes
	2	No
	3	Not sure

## volunteered

		Value
Standard Attributes	Position	8
	Label	Q.1 Which of these statements apply to you? I have volunteered in the last 12 months
	Type	Numeric
	Measurement	Nominal
Valid Values	1	Yes
	2	No
	3	Not sure

**holidayabroad**

		Value
Standard Attributes	Position	9
	Label	Q.1 Which of these statements apply to you? I have taken a holiday abroad in the last 12 months
	Type	Numeric
	Measurement	Nominal
Valid Values	1	Yes
	2	No
	3	Not sure

**satisfied**

		Value
Standard Attributes	Position	10
	Label	Q.2 All things considered how satisfied would you say you are with your life these days?
	Type	Numeric
	Measurement	Nominal
Valid Values	1	1 - Very dissatisfied
	2	2
	3	3
	4	4
	5	5
	6	6
	7	7
	8	8
	9	9
	10	10 - Very satisfied
	11	Not sure

**happiness**

Value

Standard Attributes	Position	Value
	Label	11
		Q.3 Taking all things together on a scale of 1 to 10 how happy would you say you are?
	Type	Numeric
	Measurement	Nominal
Valid Values	1	1 - Very unhappy
	2	2
	3	3
	4	4
